

Soundbar audio solutions for ***Flat panels***

Soundbar solutions,

the perfect audio add-on solution for medium and large sized flat panels.

Audipack®

It's great to have solutions...

Professional audio solutions

The perfect audio add-on for any screen of any sized videowall.

Finding a fitting solution like this is normally quite a quest to find, but Audipack manufactures a custom built soundbar and audio solution to fit any screen, presentation assembly or videowall.

The main advantage is that this speaker solution is custom built for this application to provide a mounting feature to any Audipack related product. No need to install more components than needed and simply benefit from time saving by combining products that match to each other.

Soundbar solutions for any screen

For the soundbar products, a special production method is designed. It's possible to create a soundbar that, no matter the length, the sound quality remains the same. It is even possible to incorporate 3 audio channels in one soundbar (LCR).

The internal segmentation of the components makes it possible to integrate a small amplifier and enable it to work as a stand-alone item. This can be done even when the speaker is already installed.

With its modern aluminum anodized housing and black front it's simply a modern and welcome addition to the screen and audiovisual application.

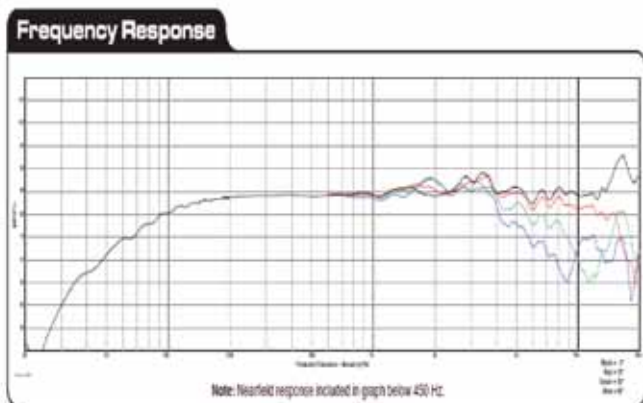

Equipped with high European quality 4" reference, full-range driver audio components, it is the perfect addition to speech and audiovisual presentations. In combination with a LSS-SW subwoofer, it provides a high quality and remarkable audio set.

Specifications

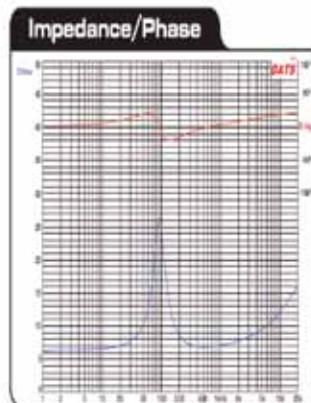

- ▲ **Max. power** 2x30 or 3x30 (LCR) watts RMS at 8 Ohm
- ▲ **Frequency** 70Hz-20K Hz
- ▲ **Dimensions** Width x H147 x D143 mm
- ▲ **Max. speaker length** 5500 mm
- ▲ **Internal space for mini amplifier available (!)**
- ▲ **Colour** Aluminium anodized with black front

Optional

- ▲ **Wall mount**
- ▲ **Ceiling mount**
- ▲ **Mount to Audipack lift systems**
